IDENTIFIED –
IN ANY POSITION

Optical code readers or RFID systems are used for the identification and tracking of objects in material flow or production processes. The fields of application range from code reading on a wide range of transport containers, motor parts or medical samples to identification without visual contact through the use of RFID technology.

Our mobile and stationary identification systems read all common 1D- and 2D-codes or the data stored on transponders with extremely high reliability. In many cases the identification has to be done independent of the orientation and positioning of the object, even at high movement speeds.

Equipped for all requirements:
- Even dirty or damaged codes can be reliably read using code reconstruction technology
- Devices are available with compact housing for the installation in compined spaces
- Our hand-held scanners – with various optics – enable code reading from distances of up to 16 meters
- Various device models as well as modular connection systems enable data transmission by using all standard fieldbus/industrial bus interfaces

THE RIGHT TECHNOLOGY

To offer the optimum solution for all requirements, we use various technologies. These range from optically reading of 1D- and 2D-codes to a contact-free data transmission through radio frequency identification.

1D-code

With 1D-codes, the information is represented using lines and gaps of various widths.
The black bars and white gaps reflect the light emitted by the 1D-code reader to different degrees. Less light is reflected by the black bars. This is detected by the receiver module of the reader, which converts the information into binary data that can subsequently be processed further and output via an interface.

Advantages
- Simple and inexpensive to create
- Through an integrated check digit, the code is directly checked for validity, thereby making possible high first reading rates

1D-code

Areas of application
- Electronics, automotive and consumer goods industries
- Transport logistics
- Postal shipping

2D-codes

There are two types of 2D-codes: the matrix code and the stacked code. With the matrix code, the information is represented by arranging small geometric cells. The stacked code is a special case. Here, the information is represented by lines and gaps in multiple rows. The camera of the sensor takes a picture of the code. The camera chip detects the contrast between the white gaps and the black cells and converts the information into binary data. This is then processed further and output via an interface. Unlike the 1D-code, the information is contained in the arrangement of the cells.

2D matrix code

2D stacked code

Advantages
- Minimal space requirement
- Highest-possible information content
- Through the integrated error algorithm, even damaged codes can be read error-free

Advantages
- Compact code compared to 1D-codes
- Variable width and height
- Through the integrated error algorithm, even damaged codes can be read error-free

Areas of application
- Transport logistics
- Electronics and automotive industries
- Consumer goods and travel sectors
- Pharmaceutical industry

Areas of application
- Transport logistics
- Consumer goods industry
- Travel sector

Radio Frequency Identification – RFID

An RFID system consists of a read/write system with integrated and/or external antenna as well as at least one transponder and uses electromagnetic waves for data transmission. Each transponder consists of an antenna and a microchip on which a unique, unchangeable serial number (Unique ID) as well as – depending on the type of transponder – other object-related data is stored.
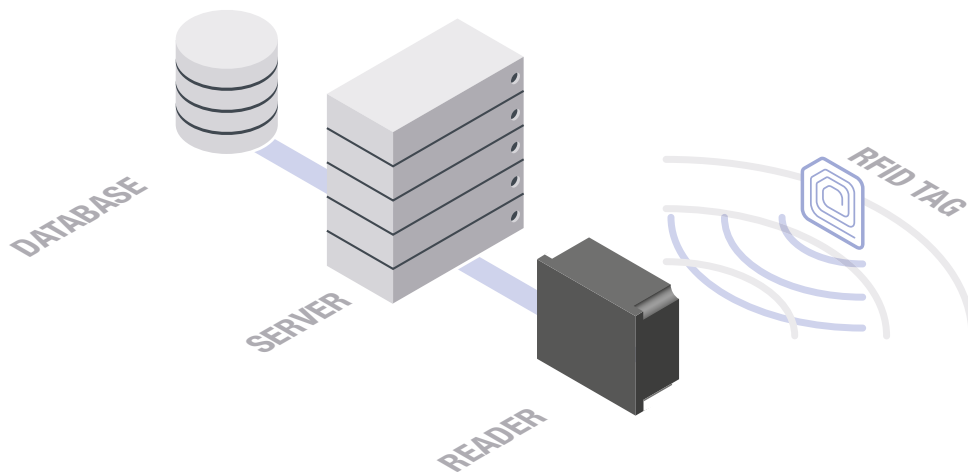

While active transponders use an integrated power source for data transmission, passive transponders draw the energy required for data transmission from the electromagnetic field of the reader. RFID systems use low frequencies/LF (125 kHz to 134 kHz), high frequencies/HF (13.56 MHz) or ultra-high frequencies/UHF (865 MHz to 928 MHz). The used frequencies vary depending on operating range, transmission rate and susceptibility to interference. In general: the reading ranges achieved by the system increase with frequency, but so too does the susceptibility to interference.
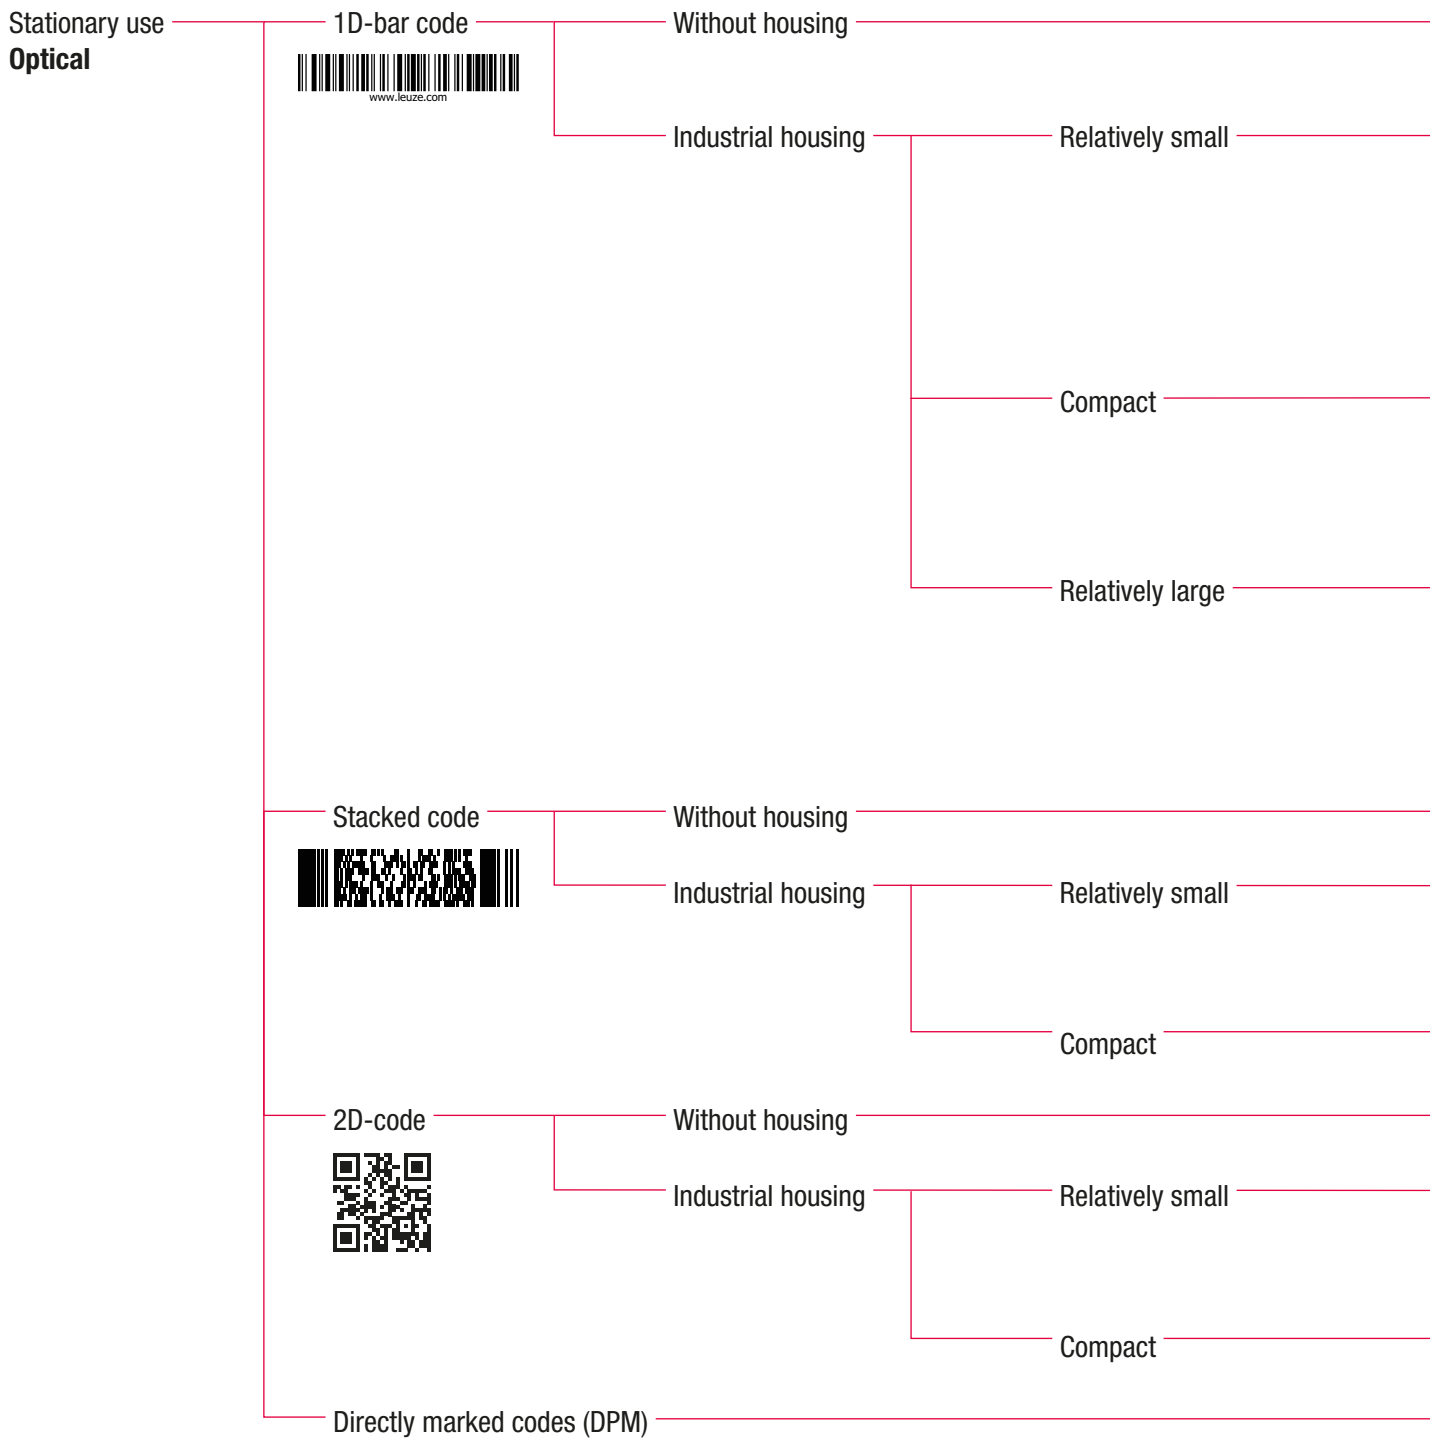

Advantages

- "Visual contact" is not required between write/read unit and transponder: the radio waves penetrate materials such as wood, cardboard or plastic depending on the frequency range
- Transponders can be integrated in the product or in the transport medium
- RFID systems are robust and also function reliably in harsh environments independent of contamination
- When using writable transponders, production and quality data can be stored directly on the transponders during the production process

Areas of application

- Production control
- Access control
- Identification of persons and objects
- Skid, container and pallet identification
- Material flow control in conveyor and storage systems or the automotive industry

1D-CODE READER APPLICATIONS

Code reading on objects of various height

Requirement: If objects of various height are transported on a conveyor line, it must be guaranteed that the 1D-codes are read independent of their position.
Solution: The BCL 300i and BCL 500i 1D-code readers are available in models with oscillating mirror that can read codes on moving objects at different heights.

Code reading in compined spaces

Requirement: If 1D-code readers are used in applications with small installation depth, a device with lateral beam exit may be necessary.
Solution: Through models with built-in deflecting mirror, the BCL 300i 1D-code readers enable a lateral beam exit. Thanks to the integrated code reconstruction technology, they can even read damaged codes reliably.

Code reading on pallets

Requirement: If codes with low modul size need to be read on objects from a relatively far distance, a 1D-code reader with the largest possible reading field depth is necessary.

Solution: The BCL 600i 1D-code readers achieve a 50% greater depth of field with their blue laser diode than devices with red laser light. The high reading field depth reduces the sensitivity in the event of variation in distance and eliminates the need for manual focus adjustment.

APPLICATIONS

## Code reading from long distances

Requirement: If objects of various height are transported on a conveyor line at high speed, it must be guaranteed that the 1D-codes are read independent of their distance to the reader.

Solution: The BCL 900i 1D-code readers have an especially large reading field due to their opening angle of 60°. The high scanning rate of up to 1,000 scans/s guarantees code reading even at high conveyor speeds.
Omnidirectional code reading

Requirement: Codes must be read independent of their orientation and position.
Solution: The BCL 500i, 600i and 900i 1D-code readers are each available as modular scanner systems. Through their arrangement, omnidirectional reading is possible.

## Code reading for objects of various height

Requirement: Codes must be read on objects with high movement speed independent of their orientation, position and height.

Solution: The BCL 900i 1D-code readers are available as modular scanner systems for omnidirectional reading. Through their high scanning rate and operating range, codes can be read on fast moving objects of various height.

Code reading of multiple rows of racks

Requirement: A large number of codes must be read at various distances within a short time.
Solution: With their focus adjustment, the BCL 148 1D-code readers enable a reading field depth of up to 310 mm. As a result, codes with a small modul size can be read even from a relatively long distance.
The fast decoding and reading by the device enable a high process speed.

Code reading on samples in compined spaces

Requirement: Codes must be read in compined spaces while at a standstill or while moving slowly.

Solution: Thanks to their extremely small design, the CR 50/55 1D-code readers are suitable for use in compined spaces.

BCL 8

Compact 1D-code readers with especially high degree of protection of the housing
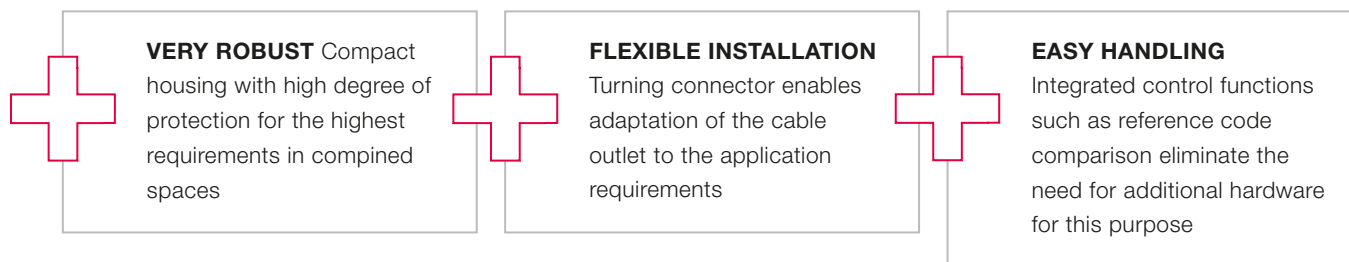

Areas of application
- Code reading in harsh industrial environments
- Code reading on objects with medium to high movement speed

Operating principle
- Laser single line, deflecting mirror

Advantages for you

VERY ROBUST Compact housing with high degree of protection for the highest requirements in compined spaces

FLEXIBLE INSTALLATION Turning connector enables adaptation of the cable outlet to the application requirements

EASY HANDLING Integrated control functions such as reference code comparison eliminate the need for additional hardware for this purpose

Features
- Reliable reading of all common 1D-codes including Pharmacodes
- Flexible installation options through front or perpendicular beam exit as well as turning connector
- Reading range: 40 – 160 mm
- Modul size: 0.15 – 0.5 mm
- Constant high scanning rate of up to 600 scans/s
- Ambient temperature (operation): 0 – 40 °C
- Interface: RS 232
- Degree of protection: IP 67
- Dimensions (W × H × L): 40.3 mm × 48 mm × 15 mm

BCL 20

1D-code reader with flexible installation options
Areas of application

- Code reading on objects with high movement speed
- Reading of 1D-codes on cylindrical objects

Operating principle

- Laser single line, raster scanner, deflecting mirror

Advantages for you

FAST COMMISSIONING
Online commands such as AutoConfig enable optimum adjustment of the devices without any additional programming work

LARGE VARIETY
Numerous models and optics enable use in various applications

Features

- Reliable reading of all common 1D-codes including Pharmacodes
- Flexible installation options through front or perpendicular beam exit
- Operating range: 50 – 450 mm (depending on device model)
- Modul size: 0.15 – 1 mm (depending on device model)
- Reading of high-resolution 1D-codes
- High scanning rate of up to 1,000 scans/s for fast movements

- Ambient temperature (operation): 0 – 40 °C
- Interfaces: RS 232, RS 485
- Degree of protection: IP 65
- Dimensions (W × H × L): 68 mm × 82 mm × 28 mm
- Models available with large depth of field and wide opening angle

BCL 95

1D-code reader with high depth of field

Areas of application

- Code reading across up to 7 rows of racks

Operating principle

- Laser single line, deflecting mirror

Advantages for you

SPACE-SAVING Large reading field height even at short reading distance reduces installation depth

FAST COMMISSIONING Configuration via Sensor Studio software enables fast commissioning

Features

- Reliable reading of all common 1D-codes including Pharmacodes
- Flexible installation options through front or perpendicular beam exit
- Reading range: 50 – 180 mm
- Modul size: 0.15 – 0.5 mm
- Scanning rate of maximum 600 scans/s also enables fast manual or automated rack insertion
- Ambient temperature (operation): 0 – 50 °C

- Interface: RS 232
- Degree of protection: IP 54
- Dimensions (W × H × L):
  – Standard model (front beam exit):
    62 mm × 43.5 mm × 23.8 mm
  – Model with deflecting mirror:
    62 mm × 56.9 mm × 23.8 mm
- High reading field height at short distances

BCL 148

1D-code reader with adjustable focus

Areas of application

- Code reading across up to 15 rows of racks

Operating principle

- Laser single line with focus adjustment

Advantages for you

SPACE-SAVING Large reading field height even at short reading distance reduces installation depth
FLEXIBLE OPERATING RANGE Adjustable focus enables the reading of codes from various distances

Features

- Reliable reading of all common 1D-codes including Pharmacodes
- Front beam exit
- Reading range: 30 – 310 mm
- Modul size: 0.127 – 0.5 mm
- Scanning rate of up to 750 scans/s also enables fast manual or automated rack insertion

- Ambient temperature (operation): 5 – 40 °C
- Interfaces: RS 232, RS 485
- Degree of protection: IP 65
- Dimensions (W × H × L): 71 mm × 38 mm × 118.5 mm
- High reading field height at short distances
- Focus adjustment for sample codes and reagents
- Robust metal housing with cable connection

BCL 300i

1D-code reader for medium to large operating ranges

Areas of application

- Code reading on objects of various height
- Code reading in compined spaces
- Code reading on objects with high movement speed

Operating principle

- Laser single line, raster scanner, deflecting mirror, oscillating mirror

Advantages for you

HIGH SYSTEM AVAIL-ABILITY Integrated code reconstruction technology enables reliable reading of damaged codes and, thus, a smooth process sequence
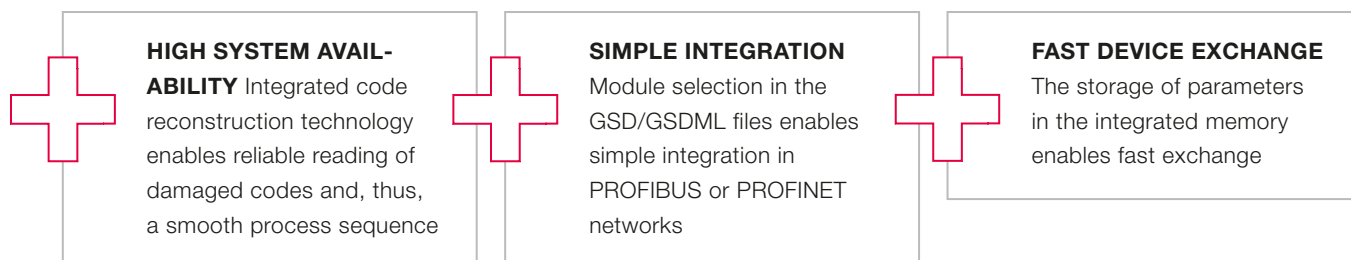

SIMPLE INTEGRATION Module selection in the GSD/GSDML files enables simple integration in PROFIBUS or PROFINET networks

FAST DEVICE EXCHANGE The storage of parameters in the integrated memory enables fast exchange

Features

- Reliable reading of all common 1D-codes
- Flexible installation options through front or perpendicular beam exit
- Reading range: 50 – 680 mm*
- Modul size: 0.127 – 0.8 mm*
- High scanning rate of up to 1,000 scans/s for objects with high movement speed
- Ambient temperature (operation): 0 – 40 °C (without heating), –35 – 40 °C (with heating)
- Interfaces: PROFIBUS, PROFINET IO/RT, Ethernet TCP/IP, UDP, Ethernet IP, EtherCAT, multiNet, RS 232, RS 422, RS 485

- Degree of protection: IP 65
- Dimensions (W × H × L): 95 mm × 44 mm × 68 mm (single line scanner), 125 mm × 58 mm × 110 mm (oscillating mirror), 103 mm × 44 mm × 96 mm (deflecting mirror)
- Connection by means of modular connection hoods with M12 connector, clamp connection or fixed connection cables
- Models available with display and heating

* depending on model

BCL 500i, BCL 600i

1D-code reader for large operating ranges and codes with small modulus width

Areas of application

- Code reading on objects of various height
- Code reading on objects from a far distance
- Code reading on objects with high movement speed

Operating principle

- Laser single line, oscillating mirror

Advantages for you

HIGH SYSTEM AVAIL-ABILITY Integrated code reconstruction technology enables reliable reading of damaged codes and, thus, a smooth process sequence

FAST COMMISSIONING Configuration via browser-based webConfig enables fast commissioning

SIMPLE INTEGRATION Module selection in the GSD/GSDML files enables simple integration in PROFIBUS or PROFINET networks

Features

- Reliable reading of all common 1D-codes
- Flexible installation options through front or perpendicular beam exit
- Reading range: 200 – 2,400 mm*
- Modul size: 0.25 – 1 mm (depending on device model)
- High scanning rate of up to 1,000 scans/s for objects with high movement speed
- Ambient temperature (operation):
  0 – 40 °C (without heating), –35 – 40 °C (with heating)
- Interfaces: PROFIBUS, PROFINET IO/RT,
  Ethernet TCP/IP, UDP, Ethernet IP, multiNet, RS 232,
  RS 422, RS 485

- Degree of protection: IP 65
- Dimensions (W × H × L):
  123.5 mm × 63 mm × 106.5 mm (single line scanner),
  173 mm × 84 mm × 147 mm (oscillating mirror)
- Diagnostics and configuration via browser-based webConfig or directly via the PLC by means of GSD/GSDML file
- Models available with display and heating
- BCL 600i: Blue laser diode enables an extended reading field without changing the focus adjustment

* depending on model

BCL 900i

1D-code reader for very large operating ranges

Areas of application
- Code reading on objects of various height
- Code reading on objects from a very far distance

Operating principle
- Laser single line

Advantages for you

VERY FAST
Very high reading rate ensures a very high object throughput

SIMPLE DETECTION
The available object tracking enables shorter distances to the code

MAXIMUM EFFICIENCY
Integrated dual optics enable a large reading field and reduce the number of devices that are required
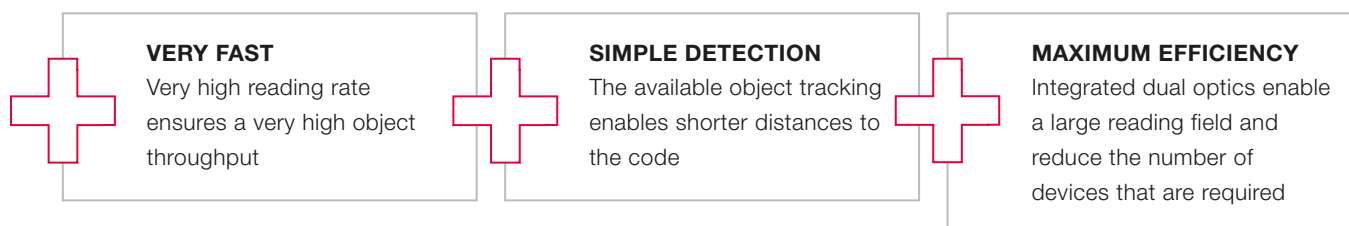

Features
- Reliable reading of all common 1D-codes
- Front beam exit
- Reading range: 450 – 1,700 mm*
- Modul size: 0.25 – 0.5 mm
- High scanning rate of up to 1,000 scans/s for objects with high movement speed
- Ambient temperature (operation): 0 – 50 °C
- Interfaces: Ethernet IP, Ethernet TCP/IP UDP, RS 232 or RS 422
- Degree of protection: IP 65
- Dimensions (W × H × L): 216 mm × 96 mm × 127 mm
- Simple teaching-in of codes using a control buttons
- Diagnostics and configuration via browser-based webConfig
- Simple focus changeover through integrated dual optics
- Integrated Ethernet switch

MSPi SYSTEMS

Modular scanner systems

Areas of application

- Code reading independent of position and orientation

Operating principle

- Laser single line

Advantages for you
FAST INSTALLATION
Pre-assembled Plug&Play system enables simple mounting and commissioning

FAST COMMISSIONING
Configuration via browser-based webConfig enables fast commissioning

Features

- Reliable reading of all common 1D-codes
- Omnidirectional arrangement enables code reading independent of the code orientation
- Models available with the BCL 500i, BCL 600i or BCL 900i 1D-code readers
- Expanded modular system for up to 32 devices
- Interfaces: PROFIBUS, PROFINET IO/RT, Ethernet TCP/IP, UDP, Ethernet IP, multiNet, RS 232, RS 422, RS 485

CR 50, CR 55

Compact 1D-code readers with large reading field
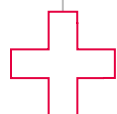

Areas of application
- Code reading in compined spaces
- Code reading on objects at a standstill or with slow movement speed

Operating principle
- Single line scanner with CCD image sensor

Advantages for you

SMALL SIZE
Large reading range in compact housing

FAST COMMISSIONING
Configuration via Sensor Studio software enables fast commissioning

Features
- Reliable reading of all common 1D-codes
- Front beam exit
- Reading range: 40 – 250 mm
- Modul size: 0.1 – 0.5 mm
- Scanning rate of up to 330 scans/s for applications at a standstill or moving slowly
- Ambient temperature (operation): 0 – 50 °C
- Interfaces: USB, RS 232
- Degree of protection: IP 54

- Miniature code reader in 2 mounting variants:
  - CR 50: Open module for integration in instrument parts, e.g., via the 12-pin connector directly on the circuit board
  - CR 55: Metal housing with optics cover and cable connection for installation at any location
- Dimensions (W × H × L):
  - CR 50: 22.5 mm × 14 mm × 33 mm
  - CR 55: 31 mm × 18.3 mm × 45.5 mm

CR 100

Compact 1D-code readers with extra large reading field at close range

Areas of application

- Code reading in compined spaces
- Reading of codes in ladder orientation

Operating principle

- Single line scanner with CCD image sensor, deflecting mirror

Advantages for you

SPACE-SAVING Large reading field height even at short reading distance reduces installation depth
FAST COMMISSIONING Configuration via browser-based webConfig enables fast commissioning

Features

- Reliable reading of all common 1D-codes including Pharmacodes
- Flexible installation options through front or perpendicular beam exit
- Reading range: 15 – 72 mm
- Modul size: 0.15 – 0.5 mm
- Scanning rate of up to 700 scans/s for reliable reading, even while in motion
- Ambient temperature (operation): 0 – 45 °C
- Interface: RS 232
- Degree of protection: IP 40
- Dimensions (W × H × L): 55 mm × 20 mm × 47 mm
- Especially well suited for use in automatic analyzers through a large reading field at short distances
- Firmware with a wide range of customization options enables fast realization of customer-specific requirements

DCR 200i

Leuze electronic

1D-/2D-CODE READER APPLICATIONS

Code reading in the production area

Requirement: In final assembly, codes are used for the traceability of individual components. These must be read on a conveyor line that – at times – moves at high speeds.
Solution: Thanks to their high scanning rate, the DCR 200i 1D-/2D-code readers enable the reading of codes on quickly moving objects. In addition, optics models are available for various reading ranges.

Manual code reading and reading in presentation mode

Requirement: In assembly processes in which large, various components are moved by hand, both automatic as well as manual code reading must be possible.

Solution: The LSIS 220 1D-/2D-code readers are equipped with various trigger options for automatic and manual operation.

Label inspection

Requirement: In addition to the reading of codes, it is often necessary during label inspection to check the position and print quality of the codes.

Solution: The LSIS 462i 1D-/2D-code readers compare the print position of the code with a position defined in advance.
In addition, the built-in image processing can be used to check the print quality and presence of plain text on labels.

APPLICATIONS

Code reading in presentation mode

Requirement: 1D-/2D-codes must be read on samples by an automatic analyzer. Devices with modular construction are necessary for use in small automatic analyzers.

Solution: With their very small size and open design, the DCR 50 1D-/2D-code readers can be optimally integrated in compined spaces.

Code reading on reagents

Requirement: 1D-/2D-codes must be read on samples or reagents by an automatic analyzer. Devices with modular construction are necessary for use in small automatic analyzers.
Solution: The DCR 55 1D-/2D-code readers can read codes in a large reading field on slowly moving objects. For very restricted installation situations, the DCR 50 is available as a model without housing.

Code reading in tube sorters

Requirement: Prior to further processing, 1D-/2D-codes must be read for sorting.

Solution: The DCR 55 1D-/2D-code readers can read codes in a large reading field. For very restricted installation situations, the DCR 50 is available without housing.

DCR 50

Camera-based built-in module for reading
1D- and 2D-codes

Areas of application

- Code reading on objects at a standstill or with slow movement speed
- Code reading in compined spaces

Operating principle

- CMOS image sensor and Rolling Shutter technology

Advantages for you

QUICK INTEGRATION
Contacting possible directly on the circuit board by means of connectors

FAST COMMISSIONING
Configuration via Sensor Studio software enables fast commissioning
Features

- Reliable reading of all common 1D- and 2D-codes independent of position and orientation
- Reading range: 30 – 425 mm
- Modul size: 0.127 – 0.528 mm
- Ambient temperature (operation): 0 – 50 °C
- Interface: RS 232

- Dimensions (W × H × L): 31.6 mm × 12.7 mm × 27.5 mm
- The open design enables the integration in instruments and the direct fastening to the pipettor
- Connection to the circuit board can be established via a 12-pin connector

DCR 55

Especially small 1D- and 2D-code readers

Areas of application
- Code reading on stationary or slowly moving objects

Operating principle
- CMOS image sensor and Rolling Shutter technology

Advantages for you
VERY ROBUST Compact metal housing with lens cover for the highest requirements in compined spaces

FAST COMMISSIONING Configuration via Sensor Studio software enables fast commissioning

Features
- Reliable reading of all common 1D- and 2D-codes independent of position and orientation
- Reading range: 30 – 425 mm
- Modul size: 0.127 – 0.528 mm
- Ambient temperature (operation): 0 – 50 °C
- Interfaces: USB, RS 232
- Degree of protection: IP 54
- Dimensions (W × H × L): 31.5 mm × 20 mm × 40.3 mm
- Compact size enables integration in devices and instruments with limited available space

DCR 200i

Fast 1D- and 2D-code readers with modular design

Areas of application

■ Code reading on objects with high movement speed

Operating principle

■ Camera-based CMOS image sensor and Global Shutter technology

Advantages for you

FAST COMMISSIONING
Configuration via installation wizard saves time and prevents errors

VERY FLEXIBLE
Easy-to-change housing hoods enable fast adaptation to changing requirements

FAST READING
A high depth of field even with fast object movement enables a high throughput
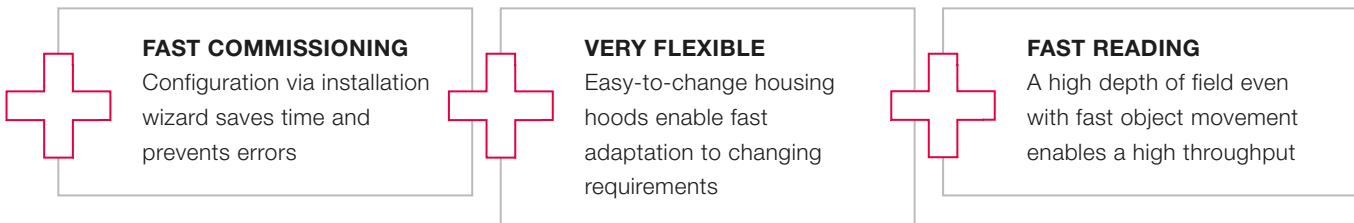

Features

■ Reliable reading of all common 1D- and 2D-codes including Pharmacodes independent of their position and orientation
■ Possible to read directly marked codes
■ Reading range: 40–800 mm (depending on optics model)
■ High resolution of 1.3 megapixels enables the reading of small codes
■ Modul size: 0.1 – 1 mm
■ Ambient temperatures (operation): 0 – 50 °C (without heating), –30 – 50 °C (with heating)
■ Interfaces: PROFINET IO/RT, Ethernet TCP/IP, UDP, RS 232, RS 422

■ Degree of protection: IP 65
■ Dimensions (W × H × L): 43 mm × 61 mm × 44 mm
■ Powerful LED illumination enables use under poor contrast conditions
■ Intelligent decoder algorithms allow code reading even with poor print quality
■ Diagnostics and configuration via browser-based webConfig or directly via the PLC by means of GSDML file
■ Model with stainless steel housing and degree of protection IP 67/69K available

LSIS 220

Compact 1D- and 2D-code readers

Areas of application
- Manual code reading and reading in presentation mode

Operating principle
- Camera-based 1D-/2D-code reader with CMOS image sensor and Global Shutter technology

Advantages for you

VERY ROBUST Compact housing with high degree of protection for the highest requirements in compined spaces

FLEXIBLE INSTALLATION Turning connector allows the cable outlet to be adapted to the application requirements
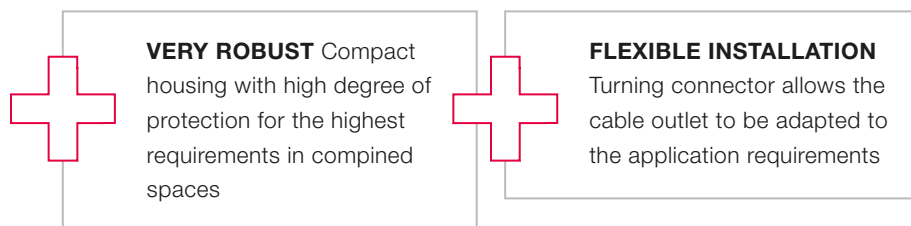

Features
- Reliable reading of all common 1D- and 2D-codes independent of their position and orientation
- Flexible installation options through M12 turning connector
- Reading range: 50 – 330 mm
- Modul size: 0.127 – 1 mm
- Ambient temperature (operation): 0 – 40 °C
- Interfaces: USB, RS 232
- Degree of protection: IP 65

- Dimensions (W × H × L): 40 mm × 32 mm × 47 mm
- Optimized camera resolution enables code reading in situations with slight movement
- Integrated optics for larger read field and in-focus detection all the way to the edge areas
- LED indicator signals that reading has been performed
- Trigger button for manual activation and configuration

LSIS 422i, LSIS 462i

High-performance 1D- and 2D-code readers
with motor-driven focus adjustment

Areas of application

- Code reading of 1D- and 2D-codes
- Label inspection

Operating principle

- Camera-based 1D-/2D-code reader with CMOS image sensor and Global Shutter technology

Advantages for you

HIGH READING QUALITY
Homogeneous illumination ensures high read quality even in unfavorable lighting conditions

INTEGRATED TEST FUNCTION Models for print check of labels available

FLEXIBLE OPERATING RANGE Motor-driven focus adjustment enables a large reading field and reduces the number of required devices
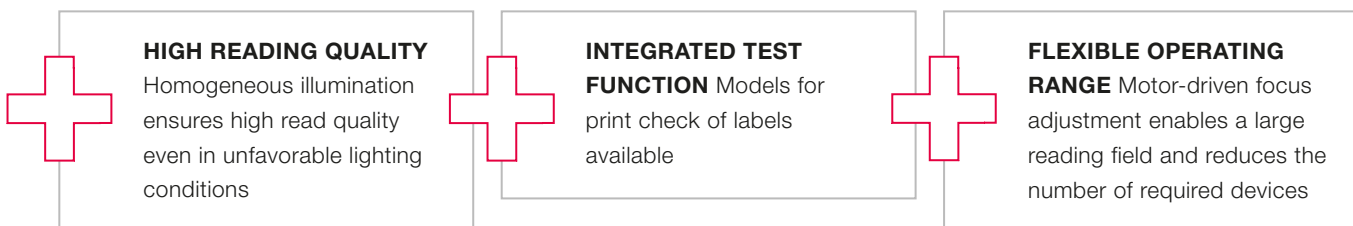

Features

- Reliable reading of all common 1D- and 2D-codes (including directly marked) independent of their position and orientation
- Reading range: 50 – 10,000 mm
- Modul size: 0.2 – 1 mm
- Ambient temperature (operation): 0 – 45 °C
- Interfaces: Ethernet TCP/IP, UDP, RS 232
- Degree of protection: IP 67
- Dimensions (W × H × L): 75 mm × 55 mm × 113 mm
- Commissioning and operation via browser-based webConfig
- Reference code comparison possible

1D-HAND-HELD SCANNER APPLICATIONS

Code reading during storage

Requirement: During storage, codes on a wide range of objects and components must be read independent of their position and orientation.

Solution: The IT 145xg, IT 190xg and IT 1300g hand-held scanners read codes independent of their position and orientation thanks to their camera-based reading technology. The devices are suitable for use in dry and clean environments.

Code reading in order processing

Requirement: During the processing of customer and production orders, 1D- or 2D-codes must be read on the corresponding order papers for each order to record and assign individual orders.

Solution: The IT 145xg and IT 190xg hand-held scanners read all common printed 1D- and 2D-codes. The especially lightweight and ergonomic housing design is gentle on the user during continuous use. The devices are suitable for use in dry and clean environments.

Code reading during order picking

Requirement: During the detection of larger goods or groups of goods, codes must generally also be read from a far distance and in harsh environments.

Solution: The IT 128xi and IT 19xxi hand-held scanners are characterized by large reading ranges. Furthermore, their housing and functionality are not affected by typical contamination (e.g., oil) or aggressive cleaning agents.

IT 145xg, IT 1300g

Hand-held scanners for all common
1D-codes

Areas of application

- Code reading in dry and clean environments

Operating principle

- Area Imager, Linear Imager

Advantages for you

COMFORTABLE USE
Easy handling through
especially lightweight and
ergonomic housing design

EASY TO CONNECT
Simple connection options
to common fieldbuses and
Industrial Ethernet

FAST COMMISSIONING
Configuration via configura-
tion codes or software
enables fast commissioning

Features

- Reliable reading of all common 1D-codes independent of
  their position
- Reading range: 10 – 460 mm
- Ambient temperature (operation): 0 – 50 °C
- Interfaces: RS 232, USB, via MA 200i also Ethernet,
  CANopen, PROFINET, DeviceNET, Ethernet IP and
  EtherCAT

- Cable-connected and Bluetooth models available
- Dimensions (W × H × L):
  – IT 1300g: 79 mm × 150 mm × 112 mm
  – IT 145xg: 82 mm × 173 mm × 62 mm
- Drop height of up to 1.5 m onto concrete floor
- Degree of protection: IP 42

IT 191xi-1D, IT 128xi

Industry-compatible hand-held scanners for all common 1D-codes

Areas of application

- Use in rough or contamination-susceptible environments

Operating principle

- Single Line Laser, Area Imager

Advantages for you

VERY ROBUST Housing with high degree of protection for the highest application requirements

EASY TO CONNECT Simple connection options to common fieldbuses and Industrial Ethernet

FAST COMMISSIONING Configuration via configuration codes or software enables fast commissioning

Features

- Reliable reading of all common 1D-Codes independent of their position and orientation
- Reading range: 25 – 4,460 mm
- Ambient temperatures (operation):
  – Wireless: –20 – 50 °C
  – Cable-connected: –30 – 50 °C
- Interfaces: RS 232, USB, via MA 200i also Ethernet, CANopen, PROFINET, DeviceNET, Ethernet IP and EtherCAT

- Cable-connected and Bluetooth models available
- Dimensions (W × H × L): 75 mm × 195 mm × 133 mm
- Drop height of up to 2 m onto concrete floor
- Degree of protection: IP 65

1D-/2D-HAND-HELD SCANNER APPLICATIONS

Code reading during order picking

Requirement: During the picking of delivery orders, 1D- and 2D-codes must be read on various moving objects.

Solution: The IT 145xg and IT 1300g hand-held scanners read all common 1D-codes. The IT 190xg hand-held scanners also read all 2D-codes, independent of their position and orientation. The devices are suitable for use in dry and clean environments.

Code reading during storage

Requirement: During the storage of larger objects, 1D- and 2D-codes must often be read in harsh industrial environments in which there is a risk of contamination by oil or lubricants.

Solution: The IT 128xi and 19xxi hand-held scanners read all common 1D- and 2D-codes independent of their position and orientation. Due to their high degree of protection, the devices are suitable for the increased requirements of industrial application environments.

Code reading for the traceability of components

Requirement: During the processing of electronic components, directly marked 1D- and 2D-codes on the individual components must often be read before they are processed further. Traceability can thereby be ensured, e.g., in the event of product recalls.

Solution: The IT 1920i DPM hand-held scanner reads all common 1D- and 2D-codes. The devices are DPM-capable and can, thus, reliably read directly marked codes. The high degree of protection of the housing also protects against damage to the sensitive components.

APPLICATIONS

Code reading for the traceability of components

Requirement: During the mounting of individual components, small 1D- and 2D-codes must be read for traceability purposes. Because the environment is often harsh and prone to contamination, directly marked codes are used in particular.

Solution: The IT 1920i and HS 66x8 hand-held scanners can withstand the high demands just as the applied codes. The devices are DPM-capable and can, thus, reliably read the directly marked codes.

Code reading in engine assembly

Requirement: During engine assembly, directly marked 2D-codes must be read on the individual components. In addition, the stress on the housing is especially high due to oily surfaces and hard floors.

Solution: The IT 1920i and HS 66x8 hand-held scanners can withstand the especially demanding application environment thanks to their high degree of protection of the housing. The devices are DPM-capable and can, thus, reliably read the directly marked codes.

Code reading on medical instruments after cleaning

Requirement: To guarantee that only sterile medical instruments are used in surgical operations, directly marked 1D- and 2D-codes must be read on the instruments for the trace-ability of the cleaning.

Solution: The IT 1920i and HS 66x8 hand-held scanners are resistant to common cleaning agents used in this area due to the degree of protection of the housing. The devices are DPM-capable and can, thus, reliably read the directly marked codes.

Code reading for verifying samples

Requirement: To verify medical samples or reagents prior to analysis, small and – in many cases – directly marked 1D- and 2D-codes must be read on these items.

Solution: The IT 1920i and HS 66x8 hand-held scanners are DPM-capable and are therefore used to read directly marked codes.

IT 19xxg

Hand-held scanners for all common 1D- and 2D-codes

Areas of application

■ Code reading in dry and clean environments

Operating principle

■ Area Imager

Advantages for you

COMFORTABLE USE
Easy handling through especially lightweight and ergonomic housing design

EASY TO CONNECT
Connection options to common fieldbuses and Industrial Ethernet

FAST COMMISSIONING
Configuration via configuration codes or software enables fast commissioning
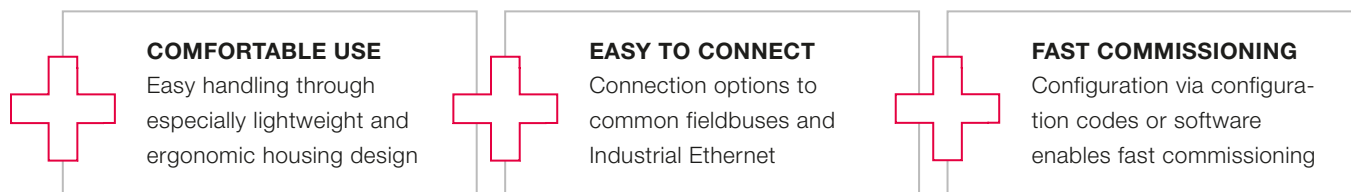

Features

■ Reliable reading of all common 1D- and 2D-codes independent of their position and orientation
■ Reading range: 0 – 596 mm
■ Ambient temperature (operation): 0 – 50 °C
■ Interfaces: RS 232, USB, via MA 200i also Ethernet, CANopen, PROFINET, DeviceNET, Ethernet IP and EtherCAT

■ Cable-connected and Bluetooth models available
■ Dimensions (W × H × L): 70 mm × 160 mm × 80 mm
■ Drop height of up to 1.8 m onto concrete floor
■ Degree of protection: IP 41
■ Optics models for various reading ranges

IT 19xxi

Industry-compatible hand-held scanners for all common 1D- and 2D-codes

Areas of application

■ Code reading in rough or contamination-susceptible industrial environments
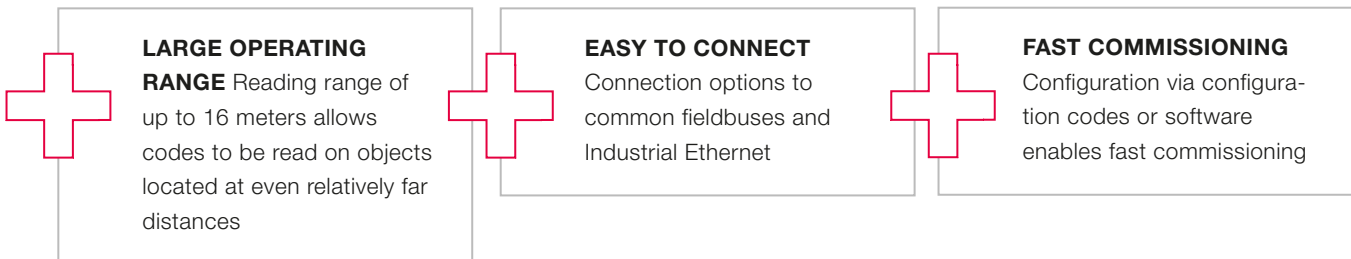

Operating principle

■ Area Imager

Advantages for you

LARGE OPERATING RANGE Reading range of up to 16 meters allows codes to be read on objects located at even relatively far distances

EASY TO CONNECT Connection options to common fieldbuses and Industrial Ethernet

FAST COMMISSIONING Configuration via configuration codes or software enables fast commissioning

Features

■ Reliable reading of all common 1D- and 2D-codes independent of their position and orientation
■ Reading range: 10 – 16,000 mm
■ Ambient temperatures (operation):
  – Wireless: –20 – 50 °C
  – Cable-connected: –30 – 50 °C
■ Interfaces: RS 232, USB, via MA 200i also Ethernet, CANopen, PROFINET, DeviceNET, Ethernet IP and EtherCAT

■ Cable-connected and Bluetooth models available
■ Dimensions (W × H × L): 75 mm × 195 mm × 133 mm
■ Drop height of up to 2 m onto concrete floor
■ Degree of protection: IP 65

IT 1920i

Industry-compatible hand-held scanners for common directly marked 1D- and 2D-codes

Areas of application
- Reading of directly marked 1D- and 2D-codes in harsh or contamination-prone industrial environments

Operating principle
- Area Imager

Advantages for you

HIGHEST PRECISION
The built-in laser orientation aid prevents the reading of an incorrect code on objects with multiple markings

EASY TO CONNECT
Connection options to fieldbuses and Industrial Ethernet

FAST COMMISSIONING
Configuration via configuration codes or software enables fast commissioning

Features
- Reliable reading of all common directly marked 1D- and 2D-codes independent of their position and orientation
- Reading range: 0 – 170 mm
- Ambient temperature (operation): –30 – 50 °C
- Interfaces: RS 232, USB, via MA 200i also Ethernet, CANopen, PROFINET, DeviceNET, Ethernet IP and EtherCAT

- Dimensions (W × H × L): 74.5 mm × 193 mm × 134 mm
- Drop height of up to 2 m onto concrete floor
- Degree of protection: IP 65
- Various illumination options enable the reading of low-contrast codes

HS 66x8

Industry-compatible hand-held scanners for common directly marked 1D- and 2D-codes
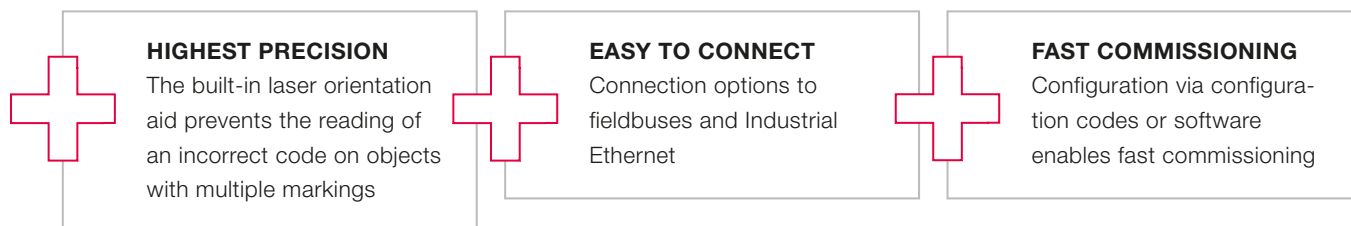

Areas of application

■ Reading of directly marked 1D- and 2D-codes in harsh or contamination-prone industrial environments

Operating principle

■ Area Imager

Advantages for you

LARGE VARIETY Various optics and illumination models enable reliable detection, even of codes with very low contrast on different surfaces

EASY TO CONNECT Connection options to common fieldbuses and Industrial Ethernet

FAST COMMISSIONING Configuration via configuration codes or software enables fast commissioning
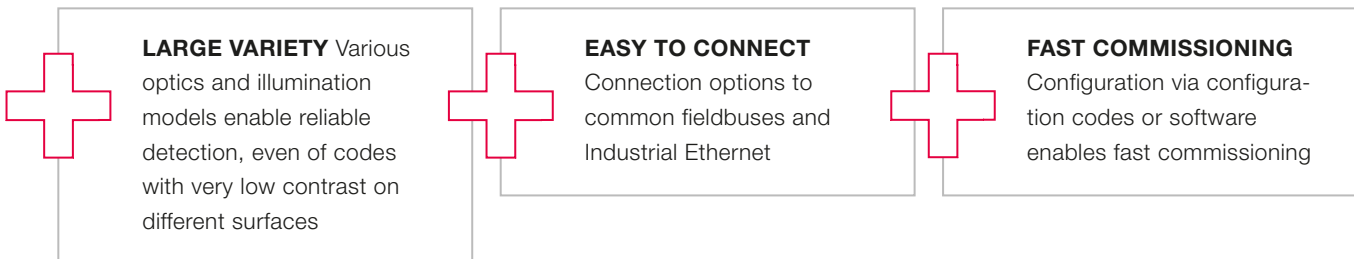

Features

■ Reliable reading of all common directly marked 1D- and 2D-codes independent of position and orientation
■ Reading range: 0 – 147 mm
■ Ambient temperatures (operation):
   – Wireless: –20 – 50 °C
   – Cable-connected: –30 – 50 °C
■ Interfaces: RS 232, USB, via MA 200i also Ethernet, CANopen, PROFINET, DeviceNET, Ethernet IP and EtherCAT

■ Cable-connected and Bluetooth models available
■ Dimensions (W × H × L): 77 mm × 185 mm × 132 mm
■ Drop height of up to 2.4 m onto concrete floor
■ Degree of protection: IP 67
■ Various illumination options enable optimum reading performance with engraved, dot-peened and laser-etched codes

RFID
APPLICATIONS

RFID container identification

Requirement: In the food industry, the containers and, thus, the data carriers are exposed to various cleaning processes and chemicals. To be able to read and, if necessary, store product-related data at every processing point, the data carriers must be especially robust.

Solution: Thanks to their high degree of protection of up to IP68/69K, the TFM and TFI transponders are – in combination with the RFM and RFI read/write devices – very well suited for use in the food industry. On the TFM transponders, quality data and process data can be stored during the production process.

RFID skid identification

Requirement: In the automotive industry, data carriers must, to some extent, withstand high temperatures during processes for the surface treatment of body parts. Furthermore, paint particles can prevent visual contact with the data carrier.

Solution: The RFID waves of the RFM read/write devices can penetrate even layers of paint. The corresponding transponders can withstand temperatures of up to 250 °C.

RFID pallet identification

Requirement: During pallet identification, the data carriers are either on the pallet or on the material that is to be transported. Here, the pallet feet may be soiled or the data carrier may be located under the packaging film. Thus, visual contact between the identification device and data carrier is possible only to a limited extent if at all.
Solution: With the RFM read/write devices, the data carriers can be read from and written to even without visual contact. Insensitive to dirt, the transponders of the TFM series are available as hard tags or smart labels.

RFI 32

RFID readers with a frequency range of
125 kHz (LF)

Areas of application

- Part tracking in container, pallet and skid transport
  systems – even under harsh ambient conditions

Advantages for you

VERY ROBUST
Cast, robust housing
enables use under harsh
ambient conditions

FAST COMMISSIONING
Easy and fast configuration
via the intuitive RF configura-
tion tool

Features

- Evaluation unit with integrated antenna reduces installation
  effort and is suitable for compined installation situations
- Reading range: 0 – 8 mm (depending on the used
  transponder)
- Reading speed: up to 0.6 m/s
- Ambient temperature (operation): –25 – 70 °C
- Interfaces: RS 232, via MA 200i also Ethernet, PROFINET,
  DeviceNET, Ethernet IP and EtherCAT

- Dimensions (W × H × L): 76 mm × 30 mm × 102 mm
- Degree of protection: IP 65
- Through the internal parameter memory, the parameters
  are retained in the device even after a power failure
- Transponders can be read to and written from in passing
- Status display directly on the device
- Insensitive to environmental materials such as water,
  textiles, plastic or wood

RFM 12, RFM 32, RFM 62

RFID read/write systems with a frequency range of 13.56 MHz (HF)

Areas of application

- Part tracking in container, pallet and skid transport systems – even under harsh ambient conditions
- Use in production control

Advantages for you

VERY ROBUST (Partially) cast, robust housings enables use under harsh ambient conditions

FAST COMMISSIONING Easy and fast configuration via the intuitive RF configuration tool

Features

- Evaluation unit with integrated antenna reduces installation effort and is suitable for compined installation situations
- Global use through ISO 15693 conformity
- Staggered reading ranges:
  – RFM 12: 0 – 45 mm
  – RFM 32: 0 – 110 mm
  – RFM 62: 0 – 400 mm
- High reading speed of up to 2 m/s (RFM 12) or up to 6 m/s (RFM 32, RFM 62)
- Ambient temperature (operation): –25 – 65 °C
- Interfaces: RS 232, via MA 200i also Ethernet, PROFINET, DeviceNET, Ethernet IP and EtherCAT
- Dimensions (W × H × L):
  – RFM 12: M30 × 98 mm
  – RFM 32: 76 mm × 30 mm × 102 mm
  – RFM 62: 298 mm × 34 mm × 298 mm

- Degrees of protection:
  – RFM 12, RFM 32: IP 67
  – RFM 62: IP 65
- Storage of quality and production data during the production process enables use for production control
- Through internal parameter memory, the parameters are retained in the device even after a power failure
- Transponders can be read to and written from in passing
- Status display directly on the device
- RFM 32 Ex: Model available for use in potentially explosive areas

TFI

Passive RFID fixcode transponders with a frequency range of 125 kHz (LF)

Areas of application

- Part tracking in container, pallet and skid transport systems

Advantages for you

HEAT-RESISTANT Special high-temperature transponders can also be used at high process temperatures

EVERYTHING FROM A SINGLE SOURCE Suitable transponders for the RFI 32 reader

SAFETY Unchangeable Unique ID offers a high level of protection against tampering

Features

- Unchangeable 8-byte Unique ID, read-only
- Degree of protection: up to IP 67
- Ambient temperature (operation): –20 – 85 °C*
- Ambient temperature (storage): –40 – 200 °C*
- Disc transponders with diameters of 30 and 50 mm
- Insensitive to environmental materials such as water, textiles, plastic or wood

* depending on model

TFM

Passive RFID transponders with a frequency range of 13.56 MHz (HF)

Areas of application

- Part tracking in container, pallet and skid transport systems
- Applications in production control (e.g., control of assembly or painting processes)

Advantages for you
HEAT-RESISTANT
Special high-temperature transponders can also be used at high process temperatures

EVERYTHING FROM A SINGLE SOURCE
Suitable transponders for the RFM 12/32/62 readers

LARGE VARIETY
Numerous models enable installation in various applications

Features

- Global use through ISO 15693 conformity
- All transponders are provided with an unchangeable Unique ID
- Storage of quality and production data during the production process enables use for production control
- Degree of protection: up to IP 68/69K
- Memory size up to 1024 bytes*

- Ambient temperature (operation): –25 – 100 °C*
- Ambient temperature (storage): –40 – 250 °C*
- Various designs and sizes available for different applications: disc transponders, key fobs, self-adhesive smart labels or plug-in cards
- Model available for use in potentially explosive areas

* depending on model

SUITABLE PRODUCTS

1D-/2D-code reader

Mounting system for rod

Suitable for BCL 300i, BCL 500i, LSIS 400i

Mounting bracket

Stainless steel / galvanized
Suitable for BCL 300i, DCR 200i

Mounting system for rod

Adjustable, turnable 360°, galvanized
Suitable for DCR 200i

Connection units

Suitable for BCL 300i, BPS 300i

Cover hoods

For replacing if operating conditions change
Suitable for DCR 200i

Starter kit

Scan engine, mounted on additional circuit board with Micro-USB socket, USB cable, USB flash memory stick with drivers and documentation
Suitable for CR 50 and CR 55

Interchangeable lenses

With various focal lengths (6–75 mm)
and diaphragms (1.4–2.8)
Suitable for LSIS 4xx M49-x9

MA-CR adapter circuit board

For laboratory and test purposes
Suitable for CR 100, BCL 95,
DCR 50, DCR 55

Additional lighting

Ring light
Suitable for DCR 200i

RFID

Mounting device

Suitable for RFM 12

Mounting device

For use in painting lines
Suitable for TFM 05 16

Spacer transponders

Suitable for TFI, TFM

SUITABLE PRODUCTS

Hand-held scanners

Wall mount

Plastic, with fastening holes

Table supports

Plastic and metal,
with flexible neck

Base station

For communication and charging
Suitable for wireless scanners

Interconnection cables

For USB and RS 232

Batteries

Suitable for wireless scanners

Battery charging stations

Suitable for external charging
of batteries

Other

Connection and interconnection cables

With M12 connection in 3-, 4- and 5-pin version

User-configurable connectors and Y distribution boxes

With M12 connection

Power supplies

For optimum sensor supply 1- and 3-phase

Passive distribution box / with IO-Link

For bundling of signals or bus connection

Optical / acoustic signaling devices

For status visualization, pre-mounted or modular

Modular connection unit RS 232 to host interface

For ODS with RS interface

EASY

Technology must serve people. Complex and technically sophisticated products should be as **easy** and intuitive to use as possible by our customers. This is both an aspiration and a development maxim – to the benefit of our customers.

EXPERI-ENCE

More than 50 years of **experience** and a close relationship with our customers have made us true experts in specific industries. This is how we develop individual sensor solutions for and with our customers.

PROXI-MITY

Think global, act local – this characterizes the sensor people. **Customer proximity** means not only being there for our customers 24/7, providing them with sound advice, and supporting them with an extensive range of services, but also responding to their individual desires and needs worldwide.

FUTURE

Sensors are the basis for all automation and for Industry 4.0 or IIoT. Together with our customers and strategic partners we are working on **future-oriented technologies** in order to make data and information available worldwide.

Switching Sensors

Optical Sensors
Ultrasonic Sensors
